

How can you manage your teleport, your DVB platform, your broadcasting satellite network, your telecommunication network, an operational center, your remote terminals? How can you check the quality of the service and ensure the continuity in case of breakdown? Are you able to detect and manage these, to automate tasks, to reduce operating costs...? Such are the constraints to which the managers in charge for the system have to face.

## ❖ SOLUTION

Stop the pressure ! Metracom can endow your transmissions centers (terrestrial – by satellite or by fiber), active securities in particular dedicated to the monitoring and to the local or distant control. The application is altogether insured by Metracom who maintains the know-how in the mastery of these solutions.

With our partners, we propose a global solution which consists of management software and specific materials. This solution notably allows to take care of the existing materials !

The management software alleviates many of the common network management problems that confront service providers delivering IPTV, VoIP, and other broadband services. It is the first time that a management software is able to consolidate management of multi-technology hybrid networks into one view, enables direct control of network device activity, and provides unlimited scalability all in a single solution.

Solution stands alone in its ability to handle bidirectional communication with any type of device, system or application. This gives operators the ability to control the actions of devices on the network, a critical advantage over traditional monitoring-only systems. Solution innovative object modeling allows for the direct assimilation of all network devices into the system -- instead of building object managers -- thus mitigating the need for costly middleware.

Solution architecture allows unlimited scalability so that communications companies can easily grow their management system as their broadband network expands.

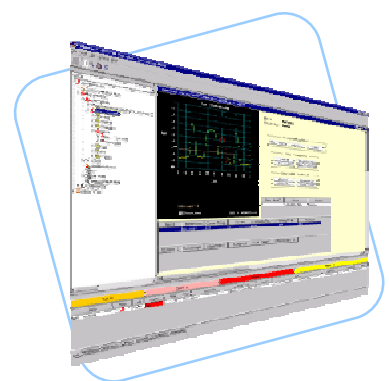

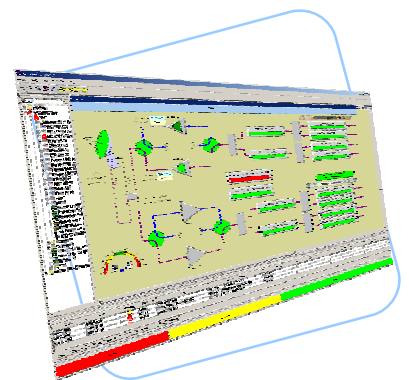

- Automatic topology discovery and display;
- Root cause analysis;
- Interface to third party systems;
- Customizable user interface;
- Browser-based access;
- Advanced user management;
- Customizable reports;
- Unified user interface.

## ❖ METRACOM, Satellite communications integrator

Competitiveness, Reliability, Neutrality, Quality are our commitments!

Because you and your projects are unique, we have to be a reliable partner for you. We want to be available and in touch with you in order to offer you suitable solutions as well as services and a real support.

So, we anticipate the technological developments, and we invest in those. We also make use of very strong partnerships contracted with the suppliers of technologies. For each project, we call on a specialist team services endowed with a great expertise acquired near operators, integrators, famous manufacturers belonging to the Satellite world. We are always at your sides here, over there, everywhere else.
